THE GERMAN BRUSH COMPANY

Dear customers, dear interested parties,

for more than 70 years, the name LESSMANN stands for a medium-size family business with high-quality surface finishing tools "Made in Germany". We thank our partners and valued customers for their support! Through seven decades of experience we are able to provide you with the highest quality and innovative products. The latest knowledge and ideas are combined in-house and implemented to first-class products for our customers worldwide.

Retailers receive a wide assortment of standard goods for fair prices. Industrial customers may expect custom-made products which agree upon the special demands in their production processes. Permanent product improvements, working with innovative raw materials and being willed to break through technical limits again and again brings us new possibilities to create the best solutions for you.

Also this year we have published our new catalogue for you. In addition to minor optical modifications, we further developed our product range and added new products to the catalogue as standard. These include brushes with PBT filament for use on grass trimmers (page 62), an extensive range of brushes for the barbecue season (page 92) and our HFB range, which we have technically optimised and expanded for you (page 140).

At start of 2019 Leesmann acquired the company Robert Thaler, which now gives us opportunity and expertise to offer our existing and new customers an extensive range of strip and sealing brushes to suit many applications. The name "Robert Thaler" will remain a brand of Lessmann GmBH and will carry the "Made in Germany" logo which ensures the customer of a quality product everytime. Further product information can be found on pages 152-157

In addition to our new product range, we continued to invest in our production and administration plants in Oettingen. The production plant has had major investments in new machinery in order to expand our capacity and improve production techniques. A new administration building is under construction which will give our employees a modern working environment and also create space for growth and employee and customer training.

Reliable service, fast reaction times, selected local partners as well as constantly growing know-how of our qualified and committed employees - with these strengths we want to be your competent partner for technical brushes also in the future as THE GERMAN BRUSH COMPANY.

We stand with our name for the achievements and decisions in the company.

QUALITY, FAIRNESS, RELIABILITY

on contributions and entrepreneurial decisions in the past. This day, we, as a family entercustomer demands and market statues, react flexible and work efficient, to gear our company up for the future!

Quality, Fairness and Reliability are the most important values in the relation to our customers and partners, since Johann LESSMANN and its children Edgar and Traudel founded a small brush factory in Oettingen.

To do the right things to the right time: the Strict quality management, uncompromising success of our company nowadays is based customer orientation and decades of experience make up the foundation of our success. One of the most important strengths are our prise in the third generation, are facing new 240 qualified and motivated employees, who are willing to get into new challenges, react flexible and to bring in their knowledge und competence. That's how we work together to have a mutual success.

Take advantage of our experience and use this idea that will lead to successful and increased sales.

INDIVIDUAL SOLUTIONS FOR SPECIAL APPLICATIONS

Often technical brushes for very special applications are requested. Devarnishing surfaces or rounding burrs. Each application is different and a standard tool could not be used in each case.

Every day we develop new brushes for industrial demands. In the majority of the cases, the aim of the operator is to increase productivity. Our experienced consultants will help you to make the right choice and to find the appropriate design of the brushes for your individual needs.

LESSMANN° **LESSMANN®**

Ш

"SIMPLY THE BEST" BY TESTING

Our own production of nearly all components Safety Tests of our standard programme and our own development of special articles enables us to have an excellent knowledge in both manufacturing quality and safety testing.

Creating Innovation, **Exceeding Safety Standards, Keeping Top Quality**

With this motivation we make complex development and product tests as an essential part of our work.

Material Tests

These are the first steps of our quality management: All deliveries of raw material are tested according to and above specification details. All wires are tested for their tensile strength and for their reverse bending strength by a fatigue measuring process.

Beside the quality of the material it is important that its attributes are as suitable as possible for their intended use.

Imbalance Test

An imbalance of machine driven brushes is not pleasant and is dangerous for the health of persons working at the machine.

Although it is not necessary under the DIN or the EN Norms, we produce our brushes according to our own standards for minimum imbalance. By doing so our customers take advantage of smooth running fatigue reducing brushes. Our employees in production ensure that these high quality aspects are maintained.

According to European safety norms all brushes have to with-stand 1.5 times of the mentioned maximum RPM. Naturally when developing a brush, we test every brush type for this safety aspect. Only if all tests are satisfactory, can the article be produced. During production many samples are taken of the brushes in order to check the required safety speed. Should a model or a raw material be changed we begin the tests again. For this very reason every customer can rely on a high quality and safe tool.

Lifetime and Power

For the measurement of the lifetime and power of technical brushes there are neither

norms nor standard procedures. After long developing processes and many tests we have found testing methods that simulate testing in real working conditions. On self built machines we are able to test the abrasion and thus the lifetime and power of machine driven brushes.

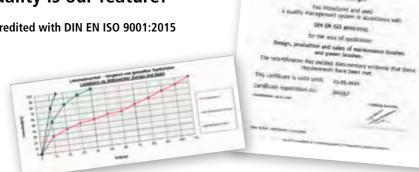

Beside the quality aspect these tests are helpful in optimising materials used, as well as component parts and the construction of brushes. Even if in comparison tests with competitor brushes such testing has shown and proved the high quality of our products:

We keep on testing to guarantee customer satisfaction.

CERTIFICATE

Quality is our feature!

Accredited with DIN EN ISO 9001:2015

RECOMMENDATIONS FOR SAFE BRUSH USE

LESSMANN Quality is Safe

We guarantee the best quality and long lifetime for our products.

Our brushes are manufactured according to the existing standard EN 1083-2 and ANSI 165.1. All the relevant machine driven brushes are checked for occupational safety using a centrifugal force test.

Safety Information

All machine driven brushes require as with other rotary tools, that the required safety precautions are kept:

Safety for Your Body

All operators and other personnel in areas where rotary brushes are being used must wear safety goggles or face shields and protective clothing.

For your own safety: Wear personal protective equipment

Brush Check

The brushes should be checked for damage before using.

Power requirements for Wheel Brushes

1 000

A correct mounting is imperative.

Peripheral Speed

The max. RPM indicated in the catalogue are safety figures by which the brushes can be used without danger. Please do not exceed these figures under any circumstances! In most cases a lower RPM is sufficient to gain an optimal result.

Correct Pressure

The schedule shows the necessary motor drive power for different brush diameters. The brushes need only a light pressure while brushing because only the wire points are effective (please look at the schedule). A higher pressure does not improve the brushing effect. In fact the brush lifetime is reduced and greater power is needed. The indicated curves inform you about the expected power. The power ratings refer to a brush with 30 mm width.

Working with Shank Brushes

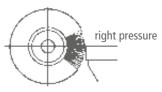

When working with shank brushes please note that the shank has to be inserted fully into the tool.

This is especially necessary when working with high RPM, for example on straight grinders and pneumatic tools.

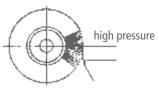

Mechanical Application of

interior brushes

Only use the brush with the indicated maximal peripheral speed (RPM max.). The max. RPM only is allowed when the brush is clamped min. for 10 mm into the tool. When the brush is inserted into the suitable work piece, higher RPMs are possible. Only use the brush right rotating.

Incorrect

These symbols in the chapters show on which machines the brushes usually are used.

LESSMANN[®] **LESSMANN®**

PRODUCING QUALITY – BRUSHING THE CORRECT WAY

Optimise Brush Results

The brush diameter and filling length are most important for the perfect brushing result. It is therefore very easy to eliminate almost all bad brushing results:

Brushing effect too weak:

- Increase the peripheral speed by increasing the brush diameter or the operating speed, but never exceed the maximum RPM rating.
- Use a brush with shorter trim length.
- Use a brush with larger wire diameter.

Brushing effect too powerful:

- Reduce the peripheral speed by reducing the brush diameter or the operating speed.
- Use a brush with longer trim length.
- Use a brush with smaller wire diameter.

Brush transfers burr:

- Use a brush with shorter trim length.
- Examine brush and work piece position.
- Use a brush with wider face.
- Use a brush with thicker wire diameter.

Note: you are welcome to contact our technical contact persons.

0.80	0.0315	21

For working in wet condition we recommend PA 6.12 as base. Please state on your order! Since the upcoming heat on wet applications is conducted, the peripheral speed can be set much higher than on dry applications.

BRUSH FILLING MATERIALS AND THE CHARACTERISTICS

STA Steel Wire straight / crimped

is developed in co-operation with wire producers, so that it meets our special requirements. This wire is alloyed with manganese in order to increase its toughness. Result is higher tensile strength and longer lifetime of LESSMANN-Brushes.

STH Steel Wire High Tensile straight / crimped

is most often used in Knotted Brushes, Deburring Brushes and Pipeline Brushes. Furthermore we offer this high tensile wire in our complete assortment. Above all it features through its tensile strength and high fatigue rates, what results in lifetime even for extreme brushing applications.

STM Brass Coated Steel Wire

For long lifetime plus high tensile strength and cutting performance. Best results in brushing and deburring applications.

STL Cord Wire

Brass coated steel wire corded. Longest lifetime for heavy duty brush applications e. g. deburring.

ROF / RO4 / ROL / RO8 Stainless Steel Wire

must be used when working on stainless steel. Material number (WNr.) **1.4301** (AISI 304). This wire is resistant against corrosion and certain acids and bleaches.

RO4 Premium-quality stainless steel wire. WNr. 1.4401 (AISI 316)

RO8 High heat resistant stainless steel wire. WNr. 1.4860.

ROL Stainless Steel Wire with cord construction WNr. 1.4301/1.4310

ROH Stainless Steel Wire High Tensile

This wire is characterized by a high tensile strength 2100 – 2500 and a long lifetime even in extreme applications. WNr. 1.4310 (AISI 301)

Further information on brushing on stainless steel materials you find at www.lessmann.com

MES Brass Wire (CuZn)

is softer than steel wire. Among other applications brass wire is suitable for working with mild bleaches. It's mainly used for processing of nonferrous metals.

straight / crimped / knotted: Metal wires for brushes can be processed in brushes straight, crimped or knotted. Wire knots are always made with straight wires. Compared to a straight wire with the same diameter the wire knots are much stronger than the single wire. Crimped wires brace each other and therefore achieve a better stability in the brushes.

BRUSH FILLING MATERIALS AND THE CHARACTERISTICS

BRO Bronze Wire (CuSn)

is used for surface processing of wood and metal. It's also used when low-sparking brushes are needed.

NSI Nickel Silver (CuNiZn)

is used for polishing work pieces e. g. parts of nickel silver or brass, as it is softer than steel wire

PP, PA, PE, PBT Synthetic Filaments

are resistant to abrasion and flexible. Despite minor resistance against heat these filaments are perfect for cleaning, grinding or surface pro-

cessing of metal, plastic or wood. Available are:

- Polypropylen (PP)
- Polyamid (PA) PA 6, PA 6.6, PA 6.12
- Polyethylen (PE)
- · Polyester (PBT); only for cleaning

IR Fibre

consists of heat resistant plant fibre, is slightly abrasive and therefore can be used for smooth grinding, above all for working on wooden surfaces. Moreover fibre is used for general cleaning and polishing work.

ROS Horse Hair

is an animal hair, which above all is deployed in terms of light cleaning and dusting work. Horse hair is resistant against diluted acids and bleaches. It's not chargeable for static electricity.

Encapsulated Brushes

Encapsulated brushes are ideal for an aggressive work on working pieces and for a very exact working in edges and angles.

By embedding steel wire, stainless steel wire, brass coated wire or brass wire in tough plastic, the filling width always remains the same and early break of the wires can be prevented. It's the perfect tool for long lasting and safe working. The advantages when working with encapsulated brushes are longer lifetime and harder brush effect.

Furthermore the risk of injury declines when using encapsulated brushes.

However, it might be possible that the brush will leave marks on the work piece.

Abrasive Filaments

consist of polyamide bristles containing abrasive grits. This modern material is ideal for deburring work, fine surface finishing of plastic and metal parts as well as grinding, cleaning, polishing, and structuring of surfaces. With their flexible surface, brushes with abrasive filament align to the different shape of working pieces. Abrasive bristles also have grinding effects on the side, which makes them even more flexible to application possibilities. You can choose between grit (from K60 to K1000) composed of aluminium oxide (AO) and silicon carbide (SIC). Also diamond filament is available.

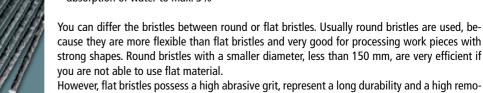

Normally 2 polyamide-types are used: Polyamide PA 6:

- · good bend recovery
- good abrasion resistance
- absorption of water to max. 10%

Polyamide PA 6.12 (ideal when working in wet surrounding):

- flexible and excellent bend recovery
- high abrasion resistance
- absorption of water to max. 3%

val rate by a larger contact surface.

3 grits in silicon carbid

- Abrasive filaments SIC (filament K60 to K1000):
 intensive results when deburring
- for surficial improvement/-processing
- mainly for process stainless steel and aluminium limited
- microhardness: 25.000 N/mm²

Common measurements: K 80/1,1, K 80/1,2, K 80/1,4, K 120/0,6, K 120/1,1, K 180/0,9, K 180/1,0, K 320/0,60, K 500/0,5

Abrasive filaments AO (filament K60 to K1000):

- less sharp-edged compared to SIC
- to the finish of soft metal
- to polishing and smoothing
- to process aluminium when smoothing or polishing
- microhardness: 21.000 N/mm²

Common measurements: K 80/1,2, K 120/1,1, K 180/0,9, K 180/1,0, K 240/0,75, K 240/0,90, K 320/0,60, K 500/0,25, K 500/0,50, K 600/0,3 — others on request.

Diamonds filaments(filament K60 to K1000):

- for aggressive applications
- used for materials with high material strength
- self-renewing through independent sharpening
- microhardness: 42.000 N/mm²

Ceramic grit:

- very good grinding and polishing properties
- maximum lifetime and aggressiveness
- working with hard metal tools
- microhardness: 42.000 N/mm²

All information on **chemical properties** can be found at www.lessmann.com/index.php/en/content/view/full/282 in the area of Brush Know-How.

Knot Wheel Brushes, multiple rows

ZF = Knot type
Z = number of knots, R = number of rows

Joint Cleaning Brushes

Joint cleaning brushes are used for the production of expansion joints in the construction of new linings as well as in restoration and reparation. The application of this knot wheel brush is usually alike with all pavements.

Brushes with brass coated steel wire STM are very stable, hence they are often used for cleaning concrete joints.

Item Nos. in bold are available ex stock.

Consider our minimum order value for *italic printed* article numbers (see page 164).

Pipeline Brushes / Stringer Bead Brushes

Pipeline-Brushes / Stringer Bead Brushes LESSMANN-Pipelinebrushes are specially developed for professional use on U- and V-welds in the pipeline industry.

The remarkable features of the high quality LESSMANN Pipeline Brushes are the long lifetime and the quietness of running. They are especially narrow and therefore they are the perfect tool for cleaning all welds at tube connections.

Pipeline Brushes / Stringer Bead Brushes, left-right knotted

Left-right knotted pipeline brushes usually are more aggressive, hence they are often used for heavy brushing operations.

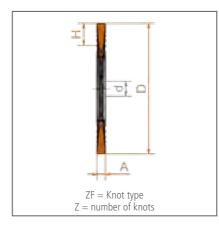

Besides the knots open less, therefore there are ideal for the treatment of edges.

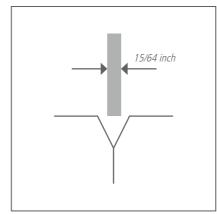

Stainless Steel Brushes

Pipeline Brushes / Stringer Bead Brushes Pipeline Brushes / Stringer Bead Brushes, with rose bud

Knotted brushes with rose bud have a longer life time. They are used for a professional treatment of weld seams in the tube and pipeline construction.

left-right knotted

Left-right knotted pipeline brushes usually are more aggressive, hence they are often used for heavy brushing operations.

Besides the knots open less, therefore they are ideal for the treatment of edges.

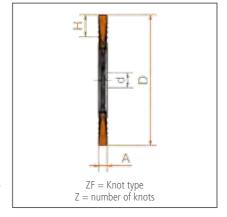

encapsulated

With encapsulated pipeline brushes a very exact and precise working is possible. By embedding in tough plastic the filling width always remains the same and early break of the wires can be prevented.

Pipeline Brushes / Stringer Bead Brushes, A working width of 6 mm still allows to reach U- and V- weld seams.

> Item Nos. in bold are available ex stock. Consider our minimum order value for italic printed article numbers (see page 164).

LESSMANN[®] **LESSM**NN°

Cutback Brushes

The removal of pipe-ends with brushes is a common process in the pipe industry.

To prevent corrosion, steel pipes are usually covered in epoxy resin and several layers of polyethylene (PE) or polypropylene (PE). To ensure a strong and safe welded joint during the installation of the pipes, the coating has to be removed completely on the ends of the pipes. For this process, usually several rings of knotted wire brushes are mounted together
The knots of this type of brush open less, to get one large block of wheel brushes.

The LESSMANN Cutback Brushes are proven to have a long lifetime and are used by many international companies producing pipe for the oil and gas industry.

LESSMANN Cutback rings are supplied already mounted to one another. This ensures a perfect balancing, an even surface and a tighter fitting.

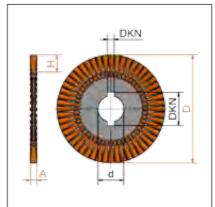

All Cutback Brushes can be purchased with left-right knotting (WZ), too.

Cutback Brushes, left-right knotted

Left-right knotted cutback brushes usually are more aggressive, hence they are often used for heavy brushing operations.

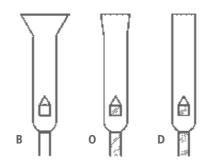

therefore there are ideal for the treatment of

Single Segment Brushes

Single Segment Brushes

These brushes are mainly used for deburring purposes in stationary machines or processing centres.

The construction of these brushes allows it to assemble them to roller brushes of any desired width. Many different filling materials like steel, stainless steel or abrasive nylon with various grit are at your disposal.

Outstanding Processing

The flexible bristles align to the different shapes of working pieces.

An important advantage of the single segment brushes compared to other grinding tools, such as pads or grinding discs, is their Laser imprint of brushes gentle treatment.

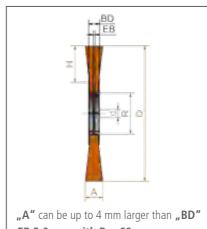

Furthermore the brushes do not become encrusted. They are suitable for deburring work and fine polishing of stainless steel, light metal or plastic material. Besides the executions listed on this page other diameters and grit sizes are available.

Stainless Steel Brushes

LESSMANN-brushes with stainless steel wire have a laser imprint.

Information on working on stainless steel you find at www.lessmann.com

STA = steel wire, crimped

STH = steel wire, high tensile, crimped

STL = cord wire, crimped

ROF = stainless steel wire, crimped

LESSMANN° LESSMANN[®]

Wheel Brushes

Wheel Brushes

Wheel brushes filled with crimped wire are used for the purpose of obtaining different surface finishing:

- the removal of rust, paint and dirt
- for roughening, deburring, stripping or polishing.

Big or Small?

A decisive factor for choosing the most suitable brush is the wire and tube diameter. Brushes with a larger tube diameter (measure R) are filled with more wire, are more aggressive and have a longer life.

In our catalogue are the usual tube diameters — other diameters can also be supplied.

More technical instruction such as peripheral speed etc. see pages 8 - 10.

The bore must be indicated in the order. Without any instruction delivery will be with standard bore "d Stand".

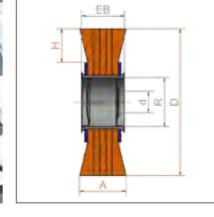

Stainless Steel Brushes

Information on working on stainless steel you find at www.lessmann.com

Other filling materials, filling diameters and special executions

Take advantage of the LESSMANN range of products, of the experience in developing and producing brushes! We are able to produce special executions on demand.

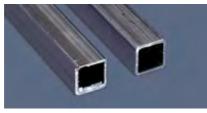

Plate with tube 80 and 100 (Set 4 / 5)

Item Nos. in bold are available ex stock. Consider our minimum order value for *italic printed* article numbers (see page 164).

STA = steel wire, crimped

STM = brass coated steel, crimped

You can find our **tutorials** here: www.lessmann.com/index.php/en/content/view/full/711

All brushes are supplied with adapter sets for easy mounting on all popular grinding machines. The adapters have the following dimensions:

Set 1 / tube 30:

30 / 1" / 22.2 / 20 / 16 / 1/2" / 12

Set 2 / tube 40:

40 / 32 / 1" / 22.2 / 20 / 16 / 1/2"

Set 3 / tube 50:

50 / 32 / 1" / 22.2 / 20 / 16 / 1/2"

Set 4 / tube 80 + 100:

brushes with metal discs, bore 50.8

and double keyway 7x13; plus

adapter to bore 30.

Set 5 / tube 80 + 100:

brushes with metal discs, bore 50.8

By usage without adapter set the actual size might be up to 0.2 mm below nominal size.

and double keyway 7x13; plus

adapter to bore 32.

Brushes for the wood machining industry

Satinising Brushes

Satinising brushes are the perfect tool for satining, polishing, abrading/smoothing, matting and structuring.

Staple Set Wheel and Disc Brushes

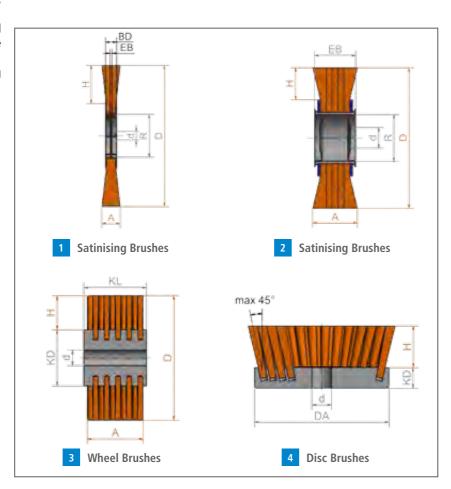

Wheel and Disc Brushes with abrasive nylon filament are used fort he wood machining industry. Used on angle grinders, the disc brushes are ideal for maintaining, cleaning, strucutring or polishing wood.

Besides the brushes are used for giving wood a rustic effect or for roughening it before treating with colour or lacquer.

The brushes are very effective when working on large surfaces.

Item Nos. in bold are available ex stock. Consider our minimum order value for *italic printed* article numbers (see page 164).

Accessories

Adapters

With these adapters the bore can be reduced For use on drilling machines. to the required size.

The wheel brushes are supplied with adapt- Metal Discs er sets which makes it possible to mount the brushes on all popular grinding machines. The adapters have the following dimensions:

Set 1 / tube 30 30 / 1" / 22,2 / 20 / 16 / 1/2" / 12 Set 2 / tube 40: 40 / 32 / 1" / 22,2 / 20 / 16 / 1/2" **Set 3** / tube 50: 50 / 32 / 1" / 22,2 / 20 / 16 / 1/2"

Set 4 / tube 80 + 100:

Set 5 / tube 80 + 100:

brushes with metal discs, bore 50.8 and double keyway 7x13; plus adapter to bore 30. Further reduction possible with set 1.

brushes with metal discs, bore 50.8 and double keyway 7x13; plus adapter to bore 32. Further reduction possible with set 1.

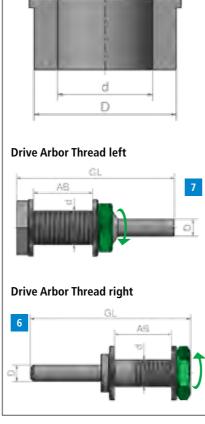

A technical advice and safety information leaflet is included.

The practical adapter sets can also be ordered separately.

Single plastic reducing rings in many different dimensions can be supplied ex stock.

Drive Arbors

Brushes with tube diameter 80 and 100 mm are supplied with our standard metal plates made of steel. Occasionally these metal plates are also required for brushes with smaller tubes. The metal plates on this page are therefore also suitable for the brushes on page 31 - 33. Please indicate the required bore size on your order and note that normally two metal plates are required for one brush.

DEBURRING BRUSHES

Deburring Brushes

Part before brushing

Deburring Brushes

Specially developed wheel brushes for deburring. These are suitable for all common deburring machines. Although they are heavier than other brushes because of their dense filling, we exclude any inbalance by evenly arranged filling material and the testing of Stainless Steel Brushes every brush. Filled with high-quality wire, LESSMANN brushes with stainless steel wire these brushes have a longer service life.

All brushes are with double keyway. Please indicate the required bore.

On the following pages you will find the For more information about deburring please Item Nos. in bold are available ex stock. standard measurements. Special measure- ask for our leaflet "Deburring with brushes". ments are available on request.

Deburring Brushes with Cord Wire STL / ROL

Deburring Brushes with cord wire are usually used for working on very hard materials. This wire construction gives the wires additional hold, hence the output of the brush is increased.

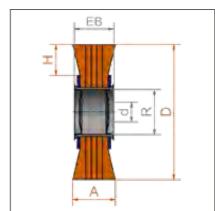

Part after brushing

Encapsulated Deburring Brushes

Are ideal for an aggressive and very exact working. An early beak of the wires can be prevented. Therefore the brush has a longer life time and a better durability.

have green site plates.

Roller Brushes

Roller Brushes

Roller Brushes for the use in deburring machines. For Deburring e.g. cutting edges of tubes

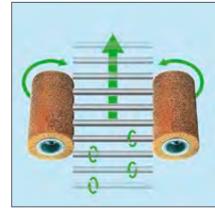

As filling material you can choose from steel and stainless steel wire, brass coated steel wire or cord wire. These brushes feature with their dense filling.

Roller Brushes
Deburring brushes are available with
D = 250 - 400 mm and
A = 55 - 700 mm

In your inquiry please indicate measure D, A and the bore e. g. 50.8 mm, 52.9 mm or 54.5 mm with double keyway 13 x 7 mm. Other bores up to 120 mm are available on demand.

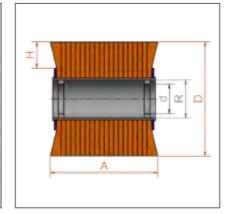

Moreover we offer with our welded metal plate special collets for the roller brushes. Bores and keyways will be produced customized

Note: Due to our advanced manufacturing technology it is possible to produce balanced roller brushes without balancing weights. Hence the brush has a steady run throughout its whole lifetime.

CUP AND BEVEL BRUSHES

Cup Brushes

Cup Brushes

Knot cup brushes are for heavy duty use: for the preparing of metal surfaces before paintcrete waste.

The brushes diameter 80/100/125 mm (Art. No. 484/486/487) have a **bridle** fitted for sta- **Special Designs** bility. The bridle can be removed after wear of the wire exposing a further 20 mm of useable

We recommend the use of our brush with diameter 90 mm for small angle grinders. For promoting sales all standard wheel brush-Compared to the common brush with diameter 65 mm this model has 50% more wire and it is really something special in the brush market!

Knot Cup Brushes with extra long filling

For the use on large areas and for a flexible cleaning and derusting of e.g. shipyards. For a use in angle grinders. Easy working also in areas which are hard to reach.

Cup Brushes, left-right knotted

Left-right knotted cup brushes usually are more aggressive, hence they are often used for heavy brushing operations.

Besides the knots open less, therefore they are ideal for the treatment of edges.

You can find our tutorials here: www.lessmann.com/ index.php/en/content/ view/full/711

Cup Brushes

Cup brushes with crimped wire are ideal for working on large surfaces with angle grinding, the removal of slag, rust, scale or coners. They can also be used for the removal of rust, paint, dirt or scale and for polishing.

The cup brushes can be delivered with different filling materials according to your requirements e. g. brushes with brass cups and brass wire for non-sparkling applications.

es are packed individually for self display. They are also available in bulk.

Stainless Steel Brushes

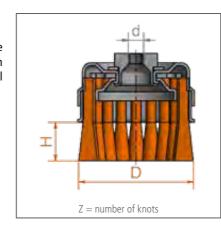

LESSMANN brushes with stainless steel wire have green cups. More information for brush applications on stainless materials you will find at www.lessmann.com

Chunky packaging

Many articles you receive as standard in handy covering boxes (10 pieces per carton).

Cup Brushes with Straight Wire
They are used for deburring surfaces, mostly in machining centers. The brushes are available with steel wire, stainless steel wire, abrasive nylon or any other filament. Due to the straight cup the filament of the brush is less flaring out and more cone points of the bristles work on the surface. Please contact us for more information! more information!

Item Nos. in bold are available ex stock. Consider our minimum order value for *italic printed* article numbers (see page 164).

LESSMANN® $\textbf{LESSM}^{\pmb{\wedge}} \textbf{NN}^{\circ}$

^{*} Packed 10 pieces per carton.
** This brush doesn't work with angle grinders.

Bevel Brushes

Bevel Brushes

The special shape of these brushes enables the user to work in hard to reach places. The knots are left hand twisted to increase stability. For promoting sales all standard knot bevel brushes are packed individually for self display. These brushes are also available bulk packed.

Wheel Brushes with thread

Like bevel brushes, wheel brushes with a thread are ideal for working in areas which are hard to reach. Usually the brushes are used on angle grinders.

Other measurements and filling materials are available on request.

Stainless Steel Brushes

LESSMANN brushes with stainless steel wire have green cups. We use wire with material number 1.4310. Material number 1.4401 can be used on request.

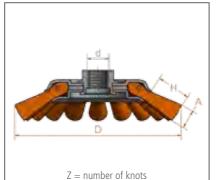

More information for brush applications on stainless materials you will find at www.lessmann.com

Bevel Brushes, left-right knotted

Left-right knotted bevel brushes usually are more aggressive, hence they are often used for heavy brushing operations.

Besides the knots open less, therefore there are ideal for the treatment of edges.

Item Nos. in bold are available ex stock. Consider our minimum order value for *italic printed* article numbers (see page 164).

Brushes for grass trimmers

Brushes for grass trimmers

Knotted brushes or Bevel Brushes with PBT on grass trimmers are ideal for removing weeds on grass pavers, curbstones, cobbled areas or other spots which are hard to reach. Those brushes clean larger areas like courtyards, terraces or longer alleys effortless and sustainable.

Besides, brushes are ecologically friendly and Right adaption of the brush they remove weeds fast and effectively.

In sensitive areas such as agriculture synthetic filaments are a decisive criterion. Synthetic bristles are soft and therefore ideally suited for sensitive surfaces, as they do not scratch. $\,$ www.lessmann.com. The brush with synthetic bristles is ideal for grass trimmers with battery due to its lighter weight and scores with a longer service life and even wear.

Attention: When working with brushes on grass trimmers, please be aware of stringent safety rules. Please take note of the data sheet we attach the brushes or have a look at

Low sparking brushes

Low sparking brushes

are recommended for the working in areas where flammable steams, liquids or dusts are tries and companies which have explosion a part of the working conditions. Also, they risks or fire hazard due to flying sparks. e.g.: are used in all other situations where sparks • Oil and gas industry could lead to a potential fire or explosion • Pipeline industry hazard.

In explosion-proof areas, low sparking brushes are recommended. In comparison to the • Food industry, e.g.: bakeries wooden handles of the hand brushes, the • And many others of brass. The filling material is bronze CuSn6. explosive environment. These materials generate a low amount of sparks, which ensures a working environment Work instructions with the minimum of sparks.

Another benefit of bronze is, its corrosion resistant properties

Typical application areas

Low sparking brushes are used in all indus-

- Chemical industry
- Nuclear power plants
- Plastics industry

bodies of machine driven brushes are made For example cleaning tanks or working in an

- Low sparking brushes (with bronze filling) are a lot softer than other regularly used fill materials e.g. Steel and Stainless Steel
- Therefore these brushes have a higher abrasion rate, this means these brushes have to be used with more carefully so as not to damage the workpiece.

2 Handbrushes export model; KL

- Overuse is to be avoided.
 - The use of low-sparking tools has to be not your only protection measure against fire or explosions.

Item Nos. in **bold** are available ex stock.

BRUSHES WITH SHANK

Wheel Brushes with Shank

Wheel Brushes with Shank

The wheel brushes shown on these pages are manufactured with a mounted shank for professional use. Tight filling wire and balanced running make these brushes excellent tools.

Knotted Wheel Brushes with Shank

It does not matter if the brush has one or two rows, the brush is the prefect tool for removing underseal, rust deburring, roughening etc. For working in narrow places we recommend our brush 417.198.11, which is an especially narrow Brush.

You can find our tutorials here: www.lessmann.com/ index.php/en/content/view/ full/711

Encapsulated Brushes

By embedding in tough plastic the filling width always remains the same and early break of the wires can be prevented. It's the perfect tool for long lasting and safe working. The colour on the picture can differ from the colour on the brush.

Wheel brushes with shank completely stainless steel

All the inner and outer parts of these brushes such as shanks, side plates, rings, etc. are made of stainless steel. Therefore these brushes are the perfect tool for working in damp and difficult places. These brushes do not have green side plates.

Structuring Brushes with Shank

These brushes are special brushes which can be used for wood grain surfaces.

Shank Brushes with Silicon Carbide

The high quality bristles with silicon carbide

can be used for deburring, polishing and

structuring of stainless steel, aluminium and

plastic surfaces. Besides the articles men-

tioned on this page we can also supply other

LESSMANN brushes with stainless steel wire

have green site plates. We use wire with

Cup Shank Brushes

Cup Brushes with Shank

Ideal for working on medium and large areas.

Cup Shank Brushes with Plastic Cup

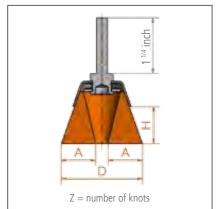

Cup Shank Brushes with Plastic Cup and stainless steel wire especially are used for applications on stainless steel materials. The plastic cup prevents contact with the working piece, therefore it protects from corrosion or other foreign particles.

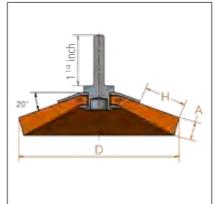

Bevel Brushes with Shank

Due to the conical form these universal tools are ideal for notches, corners, grooves, inside edges and irregular surfaces. These professional brushes are suitable for drills and cordless screwdrivers as well for high-speed straight grinders and compressed-air drives.

Brushes with steel and stainless steel wire can be used at higher RPM and can therefore be used on electrical and air driven grinding machines. These models are known for their high density of filling material and therefore they have a very long lifetime.

The brushes with silicon carbide bristles can be used for deburring, polishing or structuring of stainless steel, aluminium and plastic surfaces.

Item Nos. in bold are available ex stock. Consider our minimum order value for *italic printed* article numbers (see page 164).

	. 13
STA	= steel wire, crimped
STH	= steel wire, high tensile, straight
ROF	= stainless steel wire, crimped
SIC	= silicon carbide bristles

End Brushes with Shank

For cleaning and deburring in hard to reach areas, removal of paint, rubber excess, cleaning of moulds and castings. Also for working on edges and curves, and in the inside of the bores, etc. End brushes are also available in other shapes, spreaded or pointed.

These brushes are perfect for fast moving tools. On demand also with 1/4" shank available.

Special End Brushes, crimping

The special end brushes with narrow crimped wire are characterized by its dense filling. These brushes show a harder brushing effect brush effect. However, it might be possible than brushes with normal crimped wire. These brushes are also available with extra long piece. shanks or different diameters.

Square End Brushes

This special tool enables e. g. cleaning of blind holes and processing of bottom and side surfaces in one step.

It's perfect for cleaning and easy deburring ap- Special Design plications, e. g. square bores. Other diameters For your order please state your requirements available on demand.

Encapsulated Brushes

By embedding in tough plastic the filling width always remains the same and early break of the wires can be prevented. It's the perfect tool for long lasting and safe working. The advantages when working with encapsulated brushes are longer lifetime and harder that the brush will leave marks on the work

Stainlessless Steel Brushes

Miniature Brushes

Miniature Brushes

Miniature Brushes are used for polishing, cleaning, or deburring of small-area surfaces or small working pieces. Miniature brushes remove waste and scale from weld seams or soldering points. The brushes are used on metal surfaces, steel, aluminum, cast iron, plastics, stone or wood.

Typical fields of applications:
• Precision tools

- Fine mechanics
- Pneumatic and hydraulics
- Electronics parts, e.g. plates

Miniature Brushes are available in different types as wheel, cup and end brushes.

Item Nos. in bold are available ex stock.

Consider our minimum order value for *italic printed* types as wheel, cup and end brushes.

The typical filling materials are steel wire, stainless steel wire, brass wire or abrasive bristles.

Stainless Steel Brushes

Information on working on stainless steel you find at www.lessmann.com

Please Note: Brushes with bristles or goat hair achieve an ideal brushing result by using polish.

LESSMANN° LESSMANN[®]

HAND BRUSHES AND BROOMS

Hand Brushes

Hand Brushes

Hand Brushes are used everywhere, in the metal industry, construction work, in the workshop. They are found in every tool box. The complete range contains all types of filling materials, from coarse steel to the finest brass wire. The handles are made of beech wood with two hanging holes.

LESSMANN Handbrushes are of superb quality and yet are economic due to a fully automated and efficient production facility. Using modern marking systems individual printing of brands and EAN Bar Codes can be made. This is done by burning stamps or tampon printing at low cost.

Brake Caliper Brushes ROKI

This brush has been manufactured in co-operation with the automobile industry. This brush is used for cleaning off clogged lining deposits when changing brake pad linings. Thus the brush is very slim with a heavy straight wire filling. Made in this way it prevents damage to sensitive brake areas during use. The brush 182.431 has to the top a sloping filling and is therefore extra hard. New is the two-components-handle with the latest ergonomical aspects. Because of the design and the ergonomic handle this brush is remarkably versatile to use.

Hand Brushes with Two-Components Handles

apply to other requirements of modern high quality tools with best ergonomics.

Rivet Brushes

The V shaped filling material enables the removal of slag and scale from normally hard to reach welds and fillet welds

Hand Brushes with Scraper

For painters and bricklayers in the construction industry. These brushes are ideal for scraping off dirt or cement splashes.

Hand Brushes, Heavy Duty

These models have a larger wooden handle and a longer and dense wire filling than our standard models.

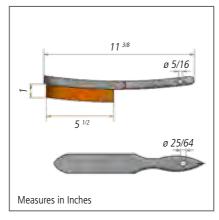

Universal Wire Brushes

For many uses, especially in the Do It Yourself

Stainless Steel Brushes

Information on brushing on stainless materials you will find at www.lessmann.com

All standard hand brushes have a bar code stamp and LESSMANN-imprint.

^{*} Wooden body varnished | ** Plastic body

Spark Plug Brushes

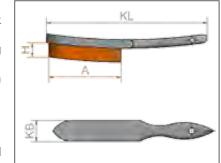

These small brushes are for all fine brushwork requiring thin wire.

They are available in different sizes and filling materials. The models 182.001 and 182.331 have plastic bodies, the other models have a beech wood body.

The body of 125.311 is varnished.

Soldering tip brushes

Soldering tip brushes have an extra dense and fine trimming. They are ideal for processing soldering tips and cleaning circuit boards after the soldering process as well as for many other fine jobs.

Item Nos. in bold are available ex stock.

Special Models

Hand Brushes Rectangular and Violin

There are many filling wires in these stable universal brushes.

Hand Brushes with Bracket

The wooden body is pointed to the front end, the plastic bracket is nailed on. The model 140.901 has an adjustable stock board which enables an adjustment to brush firmness.

These special models are mainly ordered by our export customers.

Brushes for removing wet storage stain

Zinc coated surfaces are needed for corrosion work parts, under wet conditions chemical re- jute or plastic strap. actions occur which cause wet storage stain. The special bronze wire allows the effective removal of white rust without smashing the zinc coating which has to be treated.

Radiator Brushes

This narrow, long shaped brush is ideal for Spiked Rollers hard to reach areas on heaters and radiators. The model 121.211 has a straight body, the other models have a curved body.

Staining Brushes

The treated wood is prepared with these staining brushes. By using fibre and bronze wire the brushes are insensitive against all

chemical based solutions. The model 144.211 has an adjustable stock board which enables an adjustment to brush firmness.

With the staining brushes 144.701 and 144.801 the surface after the staining process is polished by the leather insert strips. Any standing wood fibre is also smoothed.

File Cleaners

The brushes for cleaning wood and metal files are available in different sizes and with different file card. The file card is glued on to the wooden body.

File Card in Rolls

Various roughing-up tools can be manufactured with this material, which is also available in different sizes and filling materials. Available in meters or if required in single

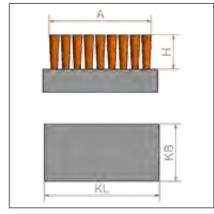

Bricklayer's Brushes

For pre and retreatment of brickwork for protection. Often after the zinc coating of painters and bricklayers. All models have a Item Nos. in bold are available ex stock.

Plasterer's Brushes

These are for roughening and structuring of plaster. Body is made of beech wood, the steel pins are hardened.

For use before the removal of wallpaper. The spiked roller perforates the paper allowing absorption of stripping solvent. The roller is of plastic with the steel pins obliquely arranged to ensure maximum efficiency in use. The handle can be made longer with customised telescopic handles. For safety the roller is supplied with a protective cover.

Consider our minimum order value for italic printed article numbers (see page 164).

Brooms and Scrubs

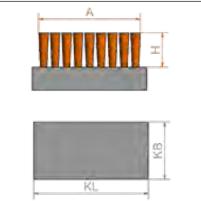

Brooms and Scrubs

Brooms and Scrubs for the use in all industrial companies and craftsman's establishments.

The shown brooms and scrubs are the best selling models.

The brooms with flat steel wire 1.80 x 0.45 mm make the so called broom lines on cement floors thus receiving a rough surface.

Item Nos. in bold are available ex stock. Consider our minimum order value for *italic printed* article numbers (see page 164).

Dusters

Dusters

Depending on the surrounding and application area, dusters are available in various models and with various filling materials. For coarse and light adherent dirt, dusters with wire filament are ideal.

Next to horse hair we offer dusters with coco filament as a good value alternative.

The duster with polyprophylene filament (straight plastic fibre) can be cleaned easily and therefore other surfaces do not get dirty. Since the water absorption of polypropylene is very low, the duster can be used also under wet conditions.

Further models in special execution with different filling materials and trim length available.

Dusters custom-made

Beside the mentioned models we provide special models with filling material and trim length according to your requirements.

Item Nos. in bold are available ex stock. Consider our minimum order value for *italic printed* article numbers (see page 164).

Weed Brushes and Weed Brooms

Weed Brush

This brush with V shaped filling material is ideal for the removal of moss and weeds in joints and edges on pavements, courtyards or cobbled areas.

Due to the long handle an ergonomic and effective working is possible. Without stooping, your back is preserved, though it is possible to remove weeds aggressively and precisely.

The brush with set filling material allows a cleaning of edges and joints which are hard to reach.

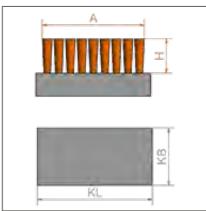

Weed Broom

As well as the weed brush, the weed broom is a brush for outdoors.

Ideally moss and weeds can be removed from terrace boards or cobblestones. An easy and clean working without stooping makes the brush to an effective broom with depth effects. High quality, with brass coated steel wires guarantee a long lifetime of the brush in the well known LESSMANN quality "Made in Germany".

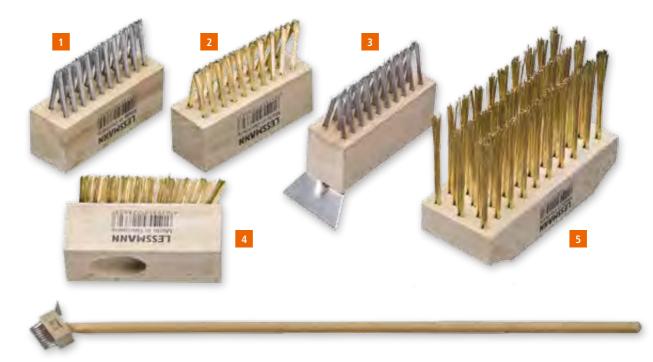

All standard hand brushes have a bar code stamp and LESSMANN-imprint.

Item Nos. in bold are available ex stock. Consider our minimum order value for *italic printed* article numbers (see page 164).

Micro Interior Brushes

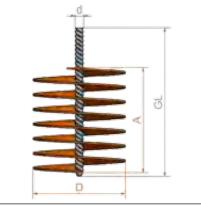

Interior brushes with zinc coated twisted wire and single spiral

Due to the filling of aluminium oxide or silicon carbide their usage is more flexible than with conventional interior brushes.

Interior brushes with abrasive filaments are usually used for deburring bores, cross bores, o-ring recesses and for polishing and cleaning small bores.

Due to the flexible surface of the bristles the interior brushes suit to the contour of the bore and areas which are hard to reach can be treated. Abrasive bristles also have grinding effects on the side. That allows a rounding of the edges also on cross bores.

Also brushes with diamond filling are available, that causes an even more aggressive surface of the brush.

Micro Interior Brushes, Steel Wire

Micro interior brushes with steel wire are used as thread brushes for descaling, deburring or cleaning:

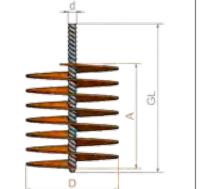

- Cross corners
- Crossovers
- Tap holes

The brushes can be used either manually or mechanically.

Please do not hesitate to contact us, we will also find for special applications a compatible solution. Due to a fully automated production, LESSMANN offers high quality to reasonable prices.

Mechanical Application

Only use the brush with the indicated maximal peripheral speed (RPM max.). The max. RPM only is allowed when the brush is clamped min. for 10 mm into the tool. When the brush is inserted into the suitable work piece, higher RPMs are possible. Only use the brush right rotating.

Consider our minimum order value for italic printed article numbers (see page 164).

AO = aluminium oxide bristles

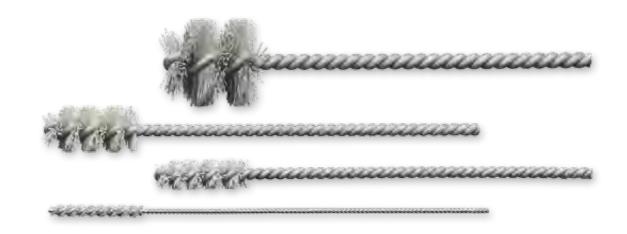

Stainless Steel Brushes

Information on working on stainless steel you find at www.lessmann.com

Mikro Interior Brushes are also available with special contours, e.g. layered cut.

Cylinder Brushes

Cylinder Brushes

For manual cleaning and deburring of tubes, bores etc. Cylinder brushes are also available in other dimensions and materials. When ordering special sizes please mention full specification: total length, filling length, filling material, diameter and quantity.

Cylinder brushes, flat filament

These flat brushes with fine, crimped steel wire are ideal for cleaning areas which are hard to reach. A typical application is removing isolation rests in channels of stators or electric motors.

Stainless Steel Brushes

Information on working on stainless steel you find at www.lessmann.com

Item Nos. in bold are available ex stock. Consider our minimum order value for *italic printed* article numbers (see page 164).

Hole Cleaning Brushes

Those hole cleaning brushes have a wooden handle. Hence the brushes allow a very comfortable working in various application fields.

Typically the brushes are used in construction bore holes or slots.

Besides, Hole Cleaning Brushes are ideal for cleaning threads or deburring cross holes.

The model 561.304 has the filling material conically cut.

Mechanical Application

Only use the brush with the indicated maximal peripheral speed (RPM max.). The max. RPM only is allowed when the brush is clamped min. for 10 mm into the tool. When the brush is inserted into the suitable work industry or handcraft business for cleaning piece, higher RPMs are possible. Only use the brush right rotating.

MES	= brass wire

LESSMANN[®]

Tube and Sleeve Brushes

Interior Brushes

These brushes are varied for many different uses: not only for cleaning of tubes, gratings, sleeves and cylinders. Interior brushes regulate current velocity in tubing systems. They are similar to the double spiral tube brushes for deburring cross drillings etc. On these pages are shown standard brushes, single spiral having two drilling wires and the double spiral having four.

Sleeve Brushes

Sleeve brushes have a double spiral and are particularly stable types of tube brushes whose trimming is cut to a conical point. Used in machines they are beneficial for cleaning the sleeves (internal threads) of con- Suitable thread adapter, tainers, e.g. after galvanisation.

Mechanical Application

Only use the brush with the indicated maximal peripheral speed (RPM max.). The max. On request tube brushes are also available RPM only is allowed when the brush is with other measurements, other filling mateclamped min. for 10 mm into the tool. When rials or other threads. the brush is inserted into the suitable work piece, higher RPMs are possible. Only use the brush right rotating.

Brushes with doublespiral

Brushes with a double spiral are mainly used for the treatment of larger diameters or for the treatment of hard materials. A double spiral is more stable and has a higher resistance against untwisting. Hence the brushes can be exposed to higher loads.

Mechanical Application
Only use the brush with the indicated maximal peripheral speed (RPM max.). The max.
RPM only is allowed when the brush is clamped min. for 10 mm into the tool. When the brush is inserted into the suitable work piece, higher RPMs are possible. Only use the brush right rotating.

Item Nos. in bold are available ex stock.

Boiler Brushes / Stove Pipe Brushes

Boiler Brushes

The systematic care of boilers and regular cleaning by brushing increases the boiler efficiency and reduces toxic emissions.

LESSMANN boiler brushes are of outstanding quality made using the best materials and precise manufacturing procedures. Our current programme includes brushes in standard dimensions and special executions. As OEM supplier to important boiler manufacturers we are able to produce large quantities in an and a grip loop, the extension pieces have efficient way. What is even more important is both an internal thread and an external our know how in meeting the critical tolerances demanded by our customers.

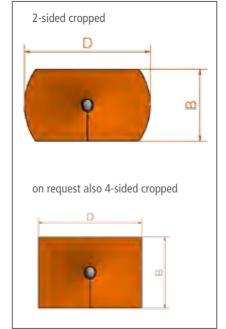

Stove Pipe Brushes

The stove pipe brushes are available in two different executions: with twisted handle (brush and handle one part) or with external thread, for screwing and lengthing by using a separate handle.

Handles and Extension Pieces

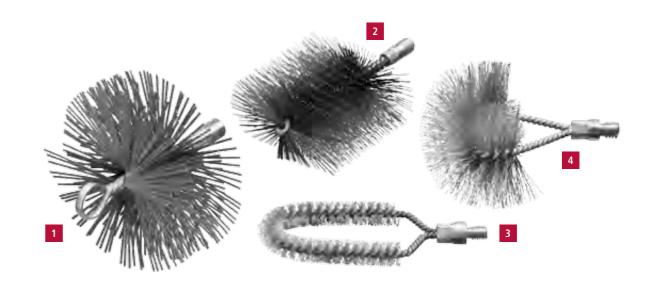

For tube brushes, boiler brushes and stove pipe brushes, see pages 115 - 117, 118 - 122. The twisted handles have an internal thread

Suitable Thread Adapters see page 123

Item Nos. in bold are available ex stock. Consider our minimum order value for *italic printed* article numbers (see page 164).

Fitting Brushes

With designed two-components handle

For the inner cleaning in tubes in gas, water and climatic conditions. We use only stainless steel wire as the filling material for these brushes. This prevents long-term damage by material deposit in tubes.

Recommendation for users: When using interior fitting brushes, please only use brushes with stainless steel wire. This will avoid pitting by the use of rusting wire parts.

Item Nos. in **bold** are available ex stock. Consider our minimum order value for italic printed article numbers (see page 164).

Battery Terminal Brushes

* conical filling

For cleaning of battery terminals. The twisted brush is conical filled for cleaning connection terminals of the battery cable. To clean the **End brush with double-sided filling** cards stuck in the handle.

Soluble Oil Brushes

With twisted wire handle for workshop use.

Soldering Fluid Brushes

The handle is made of tinned metal.

used for the manual removement of zinc ash without harming the zinc surface. Zinc ash is the result of oxidation on the surface of zinc baths. This happens usually on the edges of

steelgirders with head and base plates. The spring steel strip on the one end of the end brush is used to remove more solid parts of dirt, whereas the with stainless steel wire filled other side of the brush can be used to remove the remaining dirt.

Packing and Sales Promotion

Brushes with blister packing

All standard brushes for drilling machines and angle grinders are available with blister packing. The blister packing is available with attractive labels with information about technical data and EAN-bar code. The clam shells emphasize the brushes' value, protect them and provide good visible presentation.

On request we can arrange your individual private label solution.

INDUSTRIAL BRUSHES

Brushes with carbon fibre

Brushes with carbon fibre for electrochemical cleaning

To use in machines for cleaning weld seams

Due to oxidation on stainless steel surfaces temper colour is a result from heating. Hence often a post-treatment of the surface is necessary to reestablish the original character. End brushes with carbon fibres are used in special machines for cleaning weld seams. The typical electrochemical jobs are the following:

Cleaning

To remove tepering colour and scales on stainless steel surfaces, e.g. on weld seams.

Polishing

For polishing stainless steel surfaces. Residues can be removed with end brushes.

With special patterns surfaces can be marked permanently by the electrochemical process.

Electroplating / Surfacing

Due to the use of the end brushes, different
Time-saving and effective coatings can be put on the surfaces or they can be refined.

Cleaning of areas which are hard to reach

Before the treatment After the treatment Cleaning of weld seams

End brushes for standard machines

For many customary available machines for weld seam treatment LESSMANN offers the suitable end brushes.

Depending on the customers' demands the end brushes are available with different adapters, e.g. interior / exterior threads.

Unlike other processes, working with special machines for weld seam cleaning are environmentally friendly and by using it correctly no toxic vapours are generated.

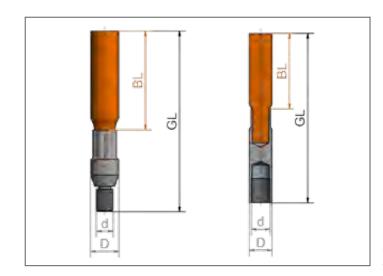

Due to the high flexibility of the filament also areas which are hard to reach can be treated

By using LESSMANN brushes within a short time a clean result is achieved. Weld seams are treated without any residues and surfaces are treated without being damaged.

High Performance Filament Brushes

HFB Disc Brushes

LESSMANN high performance surface finishing tools achieve excellent deburrings and edge radiusing on exterior and interior areas of work pieces. Next to the applications in machining centers, especially in linear deburring and finishing lines with planetary brush systems HFB brushes obtain high efficiency.

They are used for e.g. for the deburring of

- blanked parts
- sintered parts
- hydraulic and pneumatic work pieces
- aluminium work pieces
- and many more

Also work pieces which are exposed to high pressures demand precise egde radiuses. LESSMANN HFB brushes are ideal tools which achieve these requirements outstandingly.

Typical work pieces which are treated with LESSMANN HFB brushes.

Filling material

In a special production process LESSMANN HFB brushes are manufactured with a very high filling density. Available are high abrasvie nylons with silicon carbide, ceramic or diamond grit. Standard in LESSMANN HFB Brushes high very bending resistant and abrasion-resistant. Due to the application orientated selection of the filling materials an excellent deburring and constant edge radiusing in a short working time is achieved.

Depending on the HFB application the brushes can be used under dry condition or with addition of coolants.

Arrangement filling material

Depending on the requirements, the brushes can be manufactured with individual filling fields. For example, full filament is possible, but also the division of the abrasive bristles into defined fields or deviation of the bristles. quality filling material is used (PA 6.12). It is Depending on the direction of rotation, more effective processing is possible, for example due to the optimum removal of cooling water.

Examples arrangement filling material

Revised clamping system LESSMANN manufactures brush types for all common brands of machines and drilling patterns according to customer specifications. Our basic versions, suitable for the common machines with cutter head holder (DIN 6357) or combi-milling arbor holder (DIN 6358), as well as special models are available short-term. LESSMANN HFB brushes are also suitable for accessories for working under wet conditions, e.g. clamping screws with coolant holes.

On request we can deliver the brushes with bore according to your special requirements.

Revised design

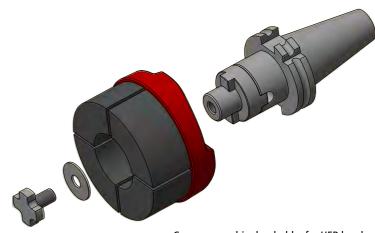

LESSMANN HFB brushes are constantly being further developed to meet the latest technical requirements. The latest adaptation is the revised design of the brush plate, which has been given a curved shape. Thus the brush can be used more flexible and the brush body is even more stable. The resulting dynamic rotation gives the brush optimum conditions for precise work. In addition, less chips and oil are trapped in the brush during machining, which leads to less abrasive wear.

User tips

- The optimum speed is usually clearly below the maximum speed. Please note the information on the brush body. See page 10 for details.
- The feed rate of the brush depends on the desired brush result and must be determined individually.
- When using the brush, make sure that all edges and surfaces to be machined are reached. In order to ensure uniform processing, it is important that the brush is not removed from the workpiece prematurely, especially during start-up and run-out.

Clamping screw with coolant holes

Common combi arbor holder for HFB brushes.

Staple Set Brushes

Staple Set Brushes

For applications with little mechanic load, brushes in a staple set edition are produced. Typical applications for staple set Wheel Brushes and Wide Face Brushes, Disc Brushes or Lath Brushes are for example cleaning, deburring, surface finishing, structurizing, smoothing, transporting, sorting or moistening.

Depending on the requirements, the filling material can be fixed individually into the body. The distance of the bundles are variable and comply with the application.

As filling material next to different wires also fibres are available. Also mixed filament in various mixing proportions are possible.

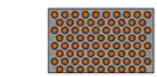

Disc Brushes usually are delivered with thread or bore. Staple set wheel and roller brushes are produced with bore or arbour absorption, depending on the customers' specification.

Please inform yourself on the following pages and do not hesitate to contact us for personal advice!

Disc Brushes – for cleaning and deburring Disc Brushes for the wood machining

Disc Brushes are used for the treatment of plane surfaces on almost every material. The numerous variations of body and trimming materials and adapter systems make them for all purposes applicable.

For deburring working pieces, disc brushes can be inserted in individual equipments as well as in machining centres for removing secondary burrs.

polishing wood.

The brushes are woon large surfaces.

Disc Brushes for the wood machining industry

Disc brushes used for the wood machining industry have a very long filling material (SIC).

Used on angle grinders, the disc brushes are ideal for maintaining, cleaning, structuring or polishing wood.

The brushes are very effective when working on large surfaces.

Circular Discs – Standard Body

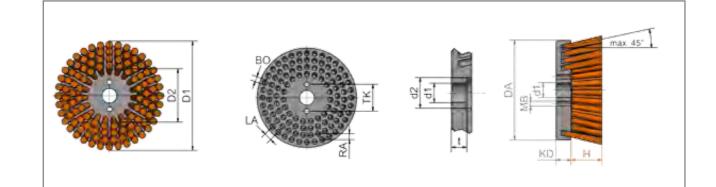

If your application allows the mentioned sizes, we recommend our standard bodies.

Staple Set Wheel and Roller Brushes

These brushes are used for cleaning, deburring, surface finishing, structurizing, smoothing and transporting.

The brush body is of wood or plastic. The filling (page 49). material is determined by the brushes purpose. Please also consider temperature, chemical and mechanical characteristics during use. Filling lenght, filling material, filling diameter and filling density are significant for the mode of action of the brush.

The density of the filling material can be varied by the diameter and the distance of and from the hole.

The staple set wheel and roller brushes are available with bore or arbor absorption, depending on the customers' specification.

The mentioned data in the chart should support you defining the right brush for your application.

For further information or support do not hesitate to contact us by e-mail, phone or fax. We will be very pleased to support you.

For applications which have a high mechanical load on the brushes we advise our wheel and roller brushes with crimped or knotted wire

As required the stocked standard bodies could be reworked (turned, drilled out) to et further dimensions

LESSMANN[®]

Strip Brushes

Everything from one source

In April of the year 2019, Lessmann took over the company Robert Thaler in Solingen, whereby the the range of strip brushes could be greatly expanded.

By taking over all the employees and their long-standing know-how as well as the plants and machinery of Robert Thaler, Lessmann now offers an extended product range of high-quality strip brushes "Made in Germany".

Highest and constant product quality as well as a wide variety of in-house products and delivery times tailored to the customer are now also guaranteed in this product category.

You will find an overview of the articles as well as an inquiry form for the strip brushes on the following pages. Further information can be found in our separate brochure or at: www.lessmann.com

You will find our **enquiry forms** in the respective category: www.lessmann.com/index.php/en/Products or in the catalogue on page 157

Strip brushes

Strip brushes can be used in many ways. Strip brushes have very dense and close filling and thus they can help to save energy with long lifetime

They seal gates and doors and prevent of infiltration, cold, humidity, leaves and dirt. They also protect moving parts (installation in machines and systems) from dust and other undesirable particles. Strip brushes also can be used for transport, guiding and securing of sensitive objects. Strip brushes from Lessmann are available in different shapes and with different adapters and filling materials.

Filling materials

All LESSMANN strip brushes are available with the following filling materials:

• Natural hair:

horse hair (grey) mixed and black

- Synthetic Filaments:
- Polypropylene PP, white and black Polyamide PA white and black
- Wires

Steel wire, stainless steel wire, brass wire

 and other natural hair and bristles, fibre, plant bristles, synthetic filaments and wires in different variants

Standard Backing

The filling materials of strip brushes will be bound in a U-shaped metal strip.

We offer following backings:

- zinc-plated steel plate
- stainless steel plate
- brass strip (only for some brush types)
- Other backing materials on request.

Strip brushes for slots / profiles

Strip brushes for slots - dimension	S		
RB	SH	ВН	GH

Strip brushes for slots

We offer strip brushes that are to be fitted in machined slots in different sizes and backing width and height. Depending on the individual application we offer different filling materials.

Profiles

We supply h- and F- Profile made of aluminium for strip brushes. On request we can produce the profiles with

perforation or/ and notches at the profile legs as well as cut them on requested measurement

Standard lengths of the profiles:

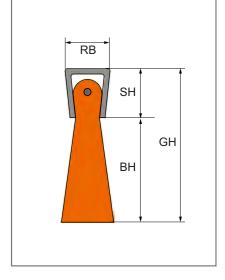

1000, 1100, 1200, 1300, 2000, 2500, 3000 mm.

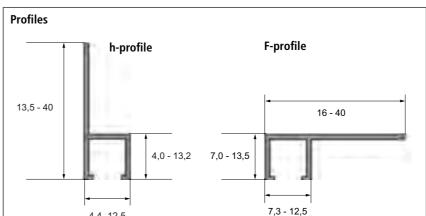

Anodized Profiles on request:

Silver, dark bronze, black as well as powder coated profiles in different colours.

Please note our standard dimensions (see separate strip brush catalogue).

Max. possible length of the brush and the profile 5000 mm (for longer brushes no delivery method possible).

Item Nos. in bold are available ex stock.

Sealing Brushes with top and lower mounting plate

We offer sealing brushes for screwing on in different sizes as well as different backing width and length of the legs.

The sealing brushes can be mounted directly. Depending on the brush application we offer different filling materials.

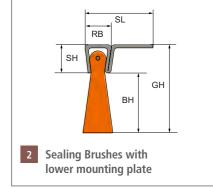

On request we can produce the profiles with perforation or/ and notches at the profile legs.

Please refer to our separate catalogue "Strip Brushes" for details on our standard dimensions and filling materials. Other dimensions available on request.

Item Nos. in bold are available ex stock. Consider our minimum order value for *italic printed* article numbers (see page 164).

General Conditions of Sale and Delivery

1. Scope

(1) Our general conditions of sale apply exclusively; we do not acknowledge any conditions of the customer which are contrary to or deviate from our general conditions of sale, unless only be held responsible for defects if the customer has corwe explicitly consented in writing to their validity.

(2) All agreements reached between us and the customer for the purpose of carrying out this contract must be made in writing. This applies also to offers and orders which were agreed with our sales representatives

(3) Our general conditions of sale shall apply only to commercial businesses, not to private consumers.

(1) All prices contained in an offer are subject to alterations. The prices are valid as fixed prices for 6 months, only after acknowledgement of the order

(2) We reserve rights of ownership and copyrights on diagrams, drawings, design worksheets and other documents; (Produkthaftungsgesetz). they must not be made accessible to third parties.

3. Prices – Terms of Payment

(1) All prices are in € (EURO), ex works Oettingen, exclusive costs of packaging.

(2) Our prices do not include Value-Added Tax.

(3) Unless stated otherwise in the acknowledgement of the order we grant 2% cash discount on payments in cash made within 10 days after the date of the invoice, payments shall be made within 30 days from the date of the invoice.

(4) In case of a delayed payment, we are entitled to demand interest at a rate of 4% p.a. above the actual basis rate of (2) In the event of seizures or other actions by third parties,

4. Period of Delivery - Despatch - Delivery on Demand

of intent and gross negligence.

(2) In case of delayed delivery the customer has to set us an appropriate time limit for the delivery. If we have not delivered by that date the customer has the right to withdraw from the contract. Customer's rights to claim damages is limited to the extent of the foreseeable damage and to cases of intent and gross negligence. In other cases the right to claim ustomer is behind with payments and/or has gone bankrupt damages is limited to the amount of the contract price.

(3) The limitations according to paragraphs (1) and (2), shall not apply in case a delivery at a fixed time has been agreed, or if the customer has lost its interest in the delivery due to take back the products, the customer shall give us the name

(4) We will keep our delivery obligations on condition that processed, marked or changed. the customer will keep its obligations correctly and in time. (5) Unless otherwise agreed we will take care of the most and at the risk of customer. This shall also apply to carriage rights and titles to be released shall be at our discretion. paid and FOB deliveries.

(6) If delivery on demand has been agreed we may buy the material necessary to produce the complete order and we may produce the complete quantity immediately

5. Warranty for Defects - Liability

(1) The customer shall examine our deliveries immediately (1) Place of jurisdiction shall be the place of our office. We and report complaints about defects immediately. We can rectly fulfilled this obligation.

(2) In case of defects we will either remedy the defect or replace the product by a not defective one. In case we replace the product we will pay the additional expenses. We will bear transport costs for the transport not farer than to the place of performance. In case of delayed delivery the customer has the option of either withdrawing from the contract or demanding a reduction in the price. Customer has no further claims. Our liability is not limited in cases of intent, gross negligence, undertaking of a guarantee, violation of an obligation non compliance with which would endanger the purpose of the contract, for damages caused by injury to life, body or health and for claims based on the German product liability law

(3) Any and all claims against us are subject to a limitation period of 12 months from delivery. This does not apply as far as §§ 438 subpar, 1 No 2, 479 subpar, 1 and 634a subpar, 1 No 2 of the German Civil Code lays down a longer period or if we are liable due to intent or gross negligence.

6. Reservation of Ownership

(1) The customer shall obtain ownership of the delivered products only after we have received all payments from the business relationship with the customer.

the customer shall inform us thereof immediately in writing. As far as the third party is not able to reimburse our total costs of legal action in accordance with paragraph 771 of (1) Our liability in cases of delayed delivery is limited to cases the German Code of Civil Procedure, the customer shall re-

> (3) The customer is entitled to sell the products. The customer us regardless of wheth er the products have been processed or not. The customer remains entitled to collect the payments from the sales. We shall not collect any payments except the and/or has stopped payments.

(4) Any processing, marking or other changes of the products by the customer shall be done on our behalf. If we have to and address of the customer who wished the products to be

(5) We shall, at the request of customer, release our rights and titles up to the amount which exceeds 20% of the value favourable way of transport at our own discretion on account of our payment claim to be protected. The selection of the

7. Place of Jurisdiction – Place of Performance – Law

also may take proceedings against the customer at the place of its office

(2) Our office is the place of performance, unless our acknowledgement of the order stated something different. (3) The laws of the Federal Republic of Germany shall apply. The United Nations Convention on Contracts for the International Sale of Goods (CISG) shall not apply.

8. Miscellaneous

(1) Special designs can not be taken back. Our deliveries may deviate from the agreed volume by +/- 15%.

(2) The minimum order value, as well as extra payments for small volume purchases, are fixed in the actual price list.

(3) Quantities deviating from the standard packet will be increased or decreased to the corresponding standard packet, otherwise extra payments per incomplete packet will be charged in accordance with the actual price list.

Minimum order value:

For stock articles (bold printed articles): net € 100 00

For special production and italic printed articles: net € 250 00 / article

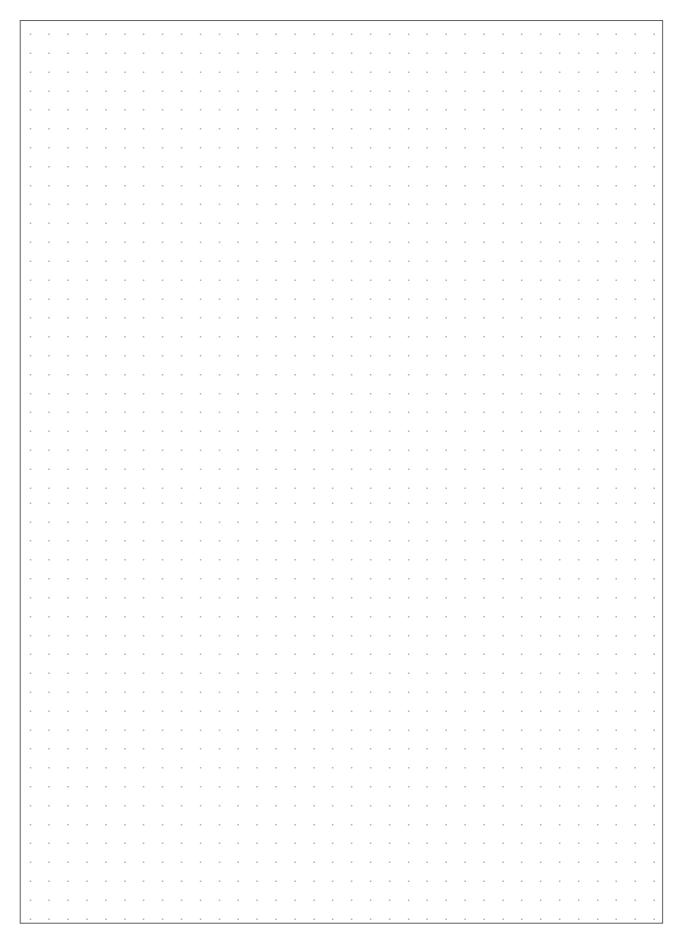

Extra payment for incomplete packets:

Express delivery on extra charge available

We reserve the right to change the construction and design of the brushes in the course of further technical developments. Information to measurements are approximate and not binding. All measurements are in mm.

The LESSMANN free dimension tolerances apply. Request

LESSMANN° 169

More information...

... found on our homepage! www.lessmann.com

Beside the variety of languages (german, • enquiry forms of the different special brushes english, spanish, czech, turkish and russian) we also provide you with useful information.

For example you can download:

- the complete article-number-catalogueside-index
- notes regarding the filling materials e.g. tables of the chemical and physical characteristics
- our brochure "Brush-Know-How"
- safety and operating instructions
- ISO 9001 certificate
- general terms and conditions

Please also ask for our special leaflets:

- Deburring with Brushes Art. No. 99EGBENG
- Interior Brushes / Miniature Brushes Art. No. 99INBENG
- Disc Brushes Art. No. 99TBDEUENG
- Brush Know How Technical Advice Art. No. 99BKHENG
- Strip Brushes Catalogue

MORE THAN 10.000 SOLUTIONS...

Due to our own engineering, tool and equipment design and our modern, also flexible, production facilities, we are able to produce special brushes in small and large batches.

CERTIFIED ACCORDING TO DIN EN ISO 9001:2015
